All 10 blood samples collected, tested negative for Dengue (Rapid NS1). Anti-larval activities and fogging was done in the affected area. Community awareness and health education given by the peripheral team on vector control measures, hygiene and sanitation.

UP/KUS/2025/50/2238	Uttar Pradesh	Kushi Nagar	Leptospirosis	21	3	25-11-2025	<b>Under Surveillance</b>	<p>Cases were reported from village Dholha (Tola Gulharia), Sub-District Tindivanam, District Kushi Nagar. 3 deaths were reported in children below 10 years (5 years male, 7 years and 3 years-4 months females) from 25.11.2025 to 28.11.2025 preceded with acute onset of fever within 2-5 days, vomiting and convulsion. The three deaths had clinical resemblance. The deceased, a 7 years old female patient, was positive for Leptospirosis and lab confirmation of other two patients was not done. The families of the deceased were residing in close proximity of 8-10 meters. Given the epidemiological linkage and environmental findings, it was a probable outbreak of Leptospirosis. District RRT investigated the outbreak. House to house survey was done. Cases were children below 15 years of age. Random samples of 21 people were collected and sent to RMRC Gorakhpur, 4 samples tested positive for <i>O. tsutsugamushi</i> (IgM ELISA), 4 samples for Japanese Encephalitis (2 samples with West Nile Virus and 1 sample with Dengue - IgM ELISA), 1 sample for West Nile Virus and 1 sample for Leptospirosis (IgM ELISA). Cases were treated at Combined Hospital Kushi Nagar and BRD Medical College, Gorakhpur. Prophylactic dose of Doxycycline and Azithromycin was given to all people of the village. Three teams in the leadership of Pediatrician were deployed in the village and a mobile ambulance was arranged for referral services. Larvicidal treatment in stagnant water and fogging was done in the affected area. Insecticide treated mosquito nets</p>
